

Aspire to use technology
for a sustainable future

Aspitech specialises in new computer sales designed for greater energy efficiency, ways to add new life to your old computer, and e-waste management strategies to help reduce your impact to the environment when your old computer is no longer needed.

Energy efficient computers

Aspitech assembles new computers made-to-order to suit your specific needs, choosing the best combination of components that improve energy efficiency and minimise waste.

Aspitech not only assembles computers; we also have an extensive network of wholesale suppliers and manufacturers, and in most cases can match many of our competitors' prices.

Better for the environment

Aspitech offers a cost-effective and easy e-waste collection service where all computers collected are assessed to determine the best environmental approach:

1) Refurbished and re-sold

The US EPA has recently estimated that reusing five desktop computers has the same environmental impact as taking one car off the road for a year.

2) Dismantled

Safely handled and sorted to ensure all materials are either recycled or responsibly reprocessed to achieve the lowest impact achievable on the environment.

Secure Data Destruction is carried out on all storage media immediately on arrival regardless of the approach used above.

Helping our community

Aspitech is an Authorised Community Microsoft Refurbisher and all computers are re-sold to low-income students, community organisations or other eligible community users.

This includes all students or Australian apprentices receiving ABSTUDY, Austudy or the Youth Allowance.

Refurbished Computers

- Secure Data Destruction performed on all data storage devices
- Cleaned, tested, repaired and in some cases upgraded
- Genuine licensed Microsoft Software XP and Office 2003 standard installed
- Quality free and open source software (FOSS) available
- Other new or used accessories, printers and parts available on request

From as little as \$180, a fully operational computer with all genuine Software to go...
